

# 16@95 Improvement Projects

Major Mobility Projects — P.I. Numbers: 0012757 and 0012758

Fact Sheet

## What are the Projects?

The 16@95 Improvement Projects will improve traffic flow and enhance safety along I-16 and I-95, one of Georgia's busiest freight corridors as well as the gateway to Georgia's growing port in Savannah.

## Things You Need to Know

- Widening the I-16 mainline corridor toward the inside median, increasing the existing general purpose roadway from two lanes to three lanes in each direction
- Reconstructing six bridges, replacing four bridges, and constructing three new bridges
- Replacing the two existing loop ramps located on the west side of I-16/I-95 Interchange with innovative turbine configuration system-to-system ramps
- Adding lighting at the I-16/I-95 Interchange
- Building a two-lane, emergency-use median crossover on I-16 between I-95 and Dean Forest Road to facilitate hurricane evacuations
- Installing Intelligent Transportation System (ITS) technology, such as cameras and changeable message signs, to provide real-time driving conditions
- Constructing a collector-distributor (CD) lane\* on I-95 northbound to separate vehicles exiting and entering from I-16

## What's the Status?

Savannah Mobility Contractors JV is the Design-Build team for the project. Construction is underway and scheduled for completion by Q3 2022.

\*Collector-distributor (CD) lanes run parallel to the main travel lanes of an interstate or highway, connecting them to access roads or entrance ramps in order to improve traffic flow, speed, and safety.
